

VIRGINIA CORRECTIONAL ENTERPRISES

Biologically Enhanced Detergent

Enzyme-producing bacteria digests organic material so it can no longer produce odors.

CorrectPac® customers have used Biologically Enhanced Detergent in a variety of unique ways. Some of these applications include:

- Pet accidents and odors on hard and soft surfaces - floors, kennels, litter boxes, rugs, upholstery and linens
- Hard to remove odors caused by perspiration on items that can't or are difficult to wash - bullet proof vests, sports wear equipment such as padding and inside helmets
- Odors and drain flies caused by food waste in trash cans, grease traps, floor drains and sink drains
- Organic matter and odors caused by mold and mildew in showers and on floors
- Organic stains such as blood and other bodily fluids, food, wine and cooking oils on hard and soft surfaces

CP2202

Spray Solution: Mix with 1 quart
Mopping Solution: Mix with 2 gallons
Drain Maintenance: Mix with 2 quarts

This product does not have hazards as defined by the OSHA Hazard Communication Standard, 29 CFR 1910.1200.

CorrectPac®

Biologically Enhanced Detergent

Customer Testimonials

At the Senior Center we were often faced with odors caused by soiled wheel chairs. Thanks to CP2202, we are able to salvage the chairs by spraying them and leaving overnight. We also removed a mystery smell discovered during a new flooring project that turned out to be cat urine in the subfloor.

- Senior Center

A resident spilled dark furniture polish on a white area rug. We quickly used CP2202 to blot the stain before it could set. It took three applications, but the stain was completely removed.

- Building Manager

Our high school football coach sprayed the players' shoes, shoulder pads, and helmets after a Friday night game. On Monday morning, he reported a significant reduction in the strong odor that was normal in the fieldhouse following a game.

- Central Mississippi High School

The kitchens for our detention centers are housed in older buildings with hard-to-reach places. We had foul odor issues from spoiled food trapped in difficult to clean areas like under preparation areas and freezer storage boxes. Our staff sprayed CP2202 under the freezers, food prep areas, cooking areas and kitchen drains before and after kitchen operations. After only a couple applications, the smells began to disappear along with flies that were attracted to the spoiled food.

- Baltimore Detention Center

A skunk sprayed the inside of an animal control vehicle. The skunk scent was greatly reduced by treating it with CP2202 so we were able to continue using the vehicle.

- North Mississippi Animal Control
